Every step of our journey reflects our growth, innovation, and commitment to excellence. From humble beginnings to global collaborations, each milestone defines who we are today.

Global Expansion

Successfully entered multiple international markets, strengthening our global footprint.

Industry Recognition

Earned numerous awards and accolades for excellence in innovation, customer service.

Strategic Partnerships

Established collaborations with key industry players, fostering knowledge exchange and fine tuned delivery.

Our Partners

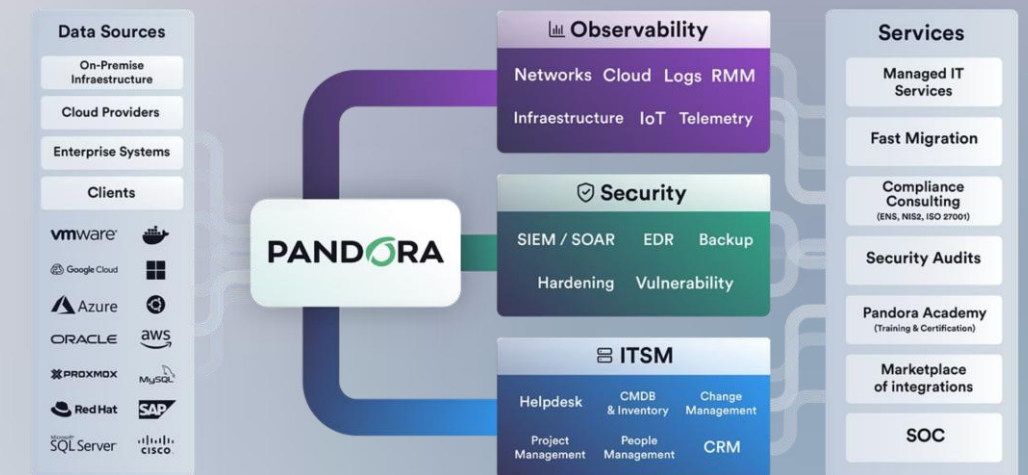

ShakaTekno has forged strategic partnerships with proven industry platforms. These collaborations ensure battle-tested, professional-grade delivery for every client engagement, combining our expertise with best-in-class technology solutions.

Pandora FMS : Intelligent Monitoring

Pandora FMS is a flexible, all-in-one monitoring solution designed to help organisations manage the health and performance of their complete IT infrastructure. It provides visibility across networks, servers, applications, virtual environments, cloud services and hardware devices using a mix of agents and remote protocols such as SNMP, WMI, ICMP and HTTP.

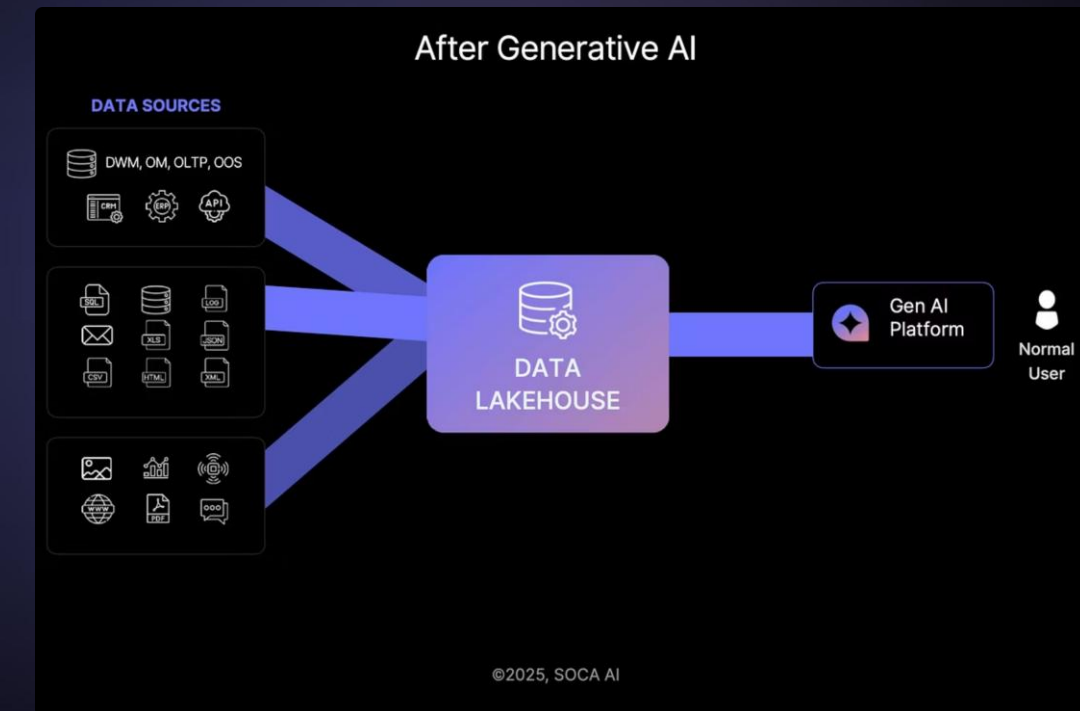

With proactive alerting, customisable dashboards, reporting and SLA-oriented metrics, Pandora FMS enables businesses to detect issues before they impact operations and to control costs by reducing downtime and streamlining support efforts. It is scalable for large distributed environments, supports real-time web monitoring and user-experience checks, and can be deployed on-premises or in hybrid/cloud setups.

Soca AI : Enterprise Agentic AI

Soca AI's flagship platform is a next-generation "agentic" AI solution built for enterprise-scale chat and voice automation. With its core platform (the "Console" or "Genesist" system), organisations can rapidly build, deploy and manage AI agents across both text and voice channels — enabling everything from conversational chat-bots and voice assistants to data-driven automation workflows. The platform offers a no-code/low-code Studio experience for business users, while also providing full control and governance for IT teams through secure role/organization management, data access policy support, and multi-agent orchestration.

In parallel, Soca AI also supports specialized modules such as its AI Voice Studio and multilingual auto-dubbing capabilities, enabling content creators and enterprises to convert scripts into lifelike voices in 30+ languages, clone audio-profiles, and localise media or educational assets efficiently. Beyond pure voice-tech, the platform extends into multimodal processing (text, data, files, images) and is positioned to help companies across sectors (education, finance, media) transform both internal operations and external content experiences.

Let's Work Together
