ENTERPRISE AI CHALLENGES

Enterprises face critical challenges that hinder AI scalability, efficiency, and security, requiring strategic solutions for seamless implementation.

Disintegration Data

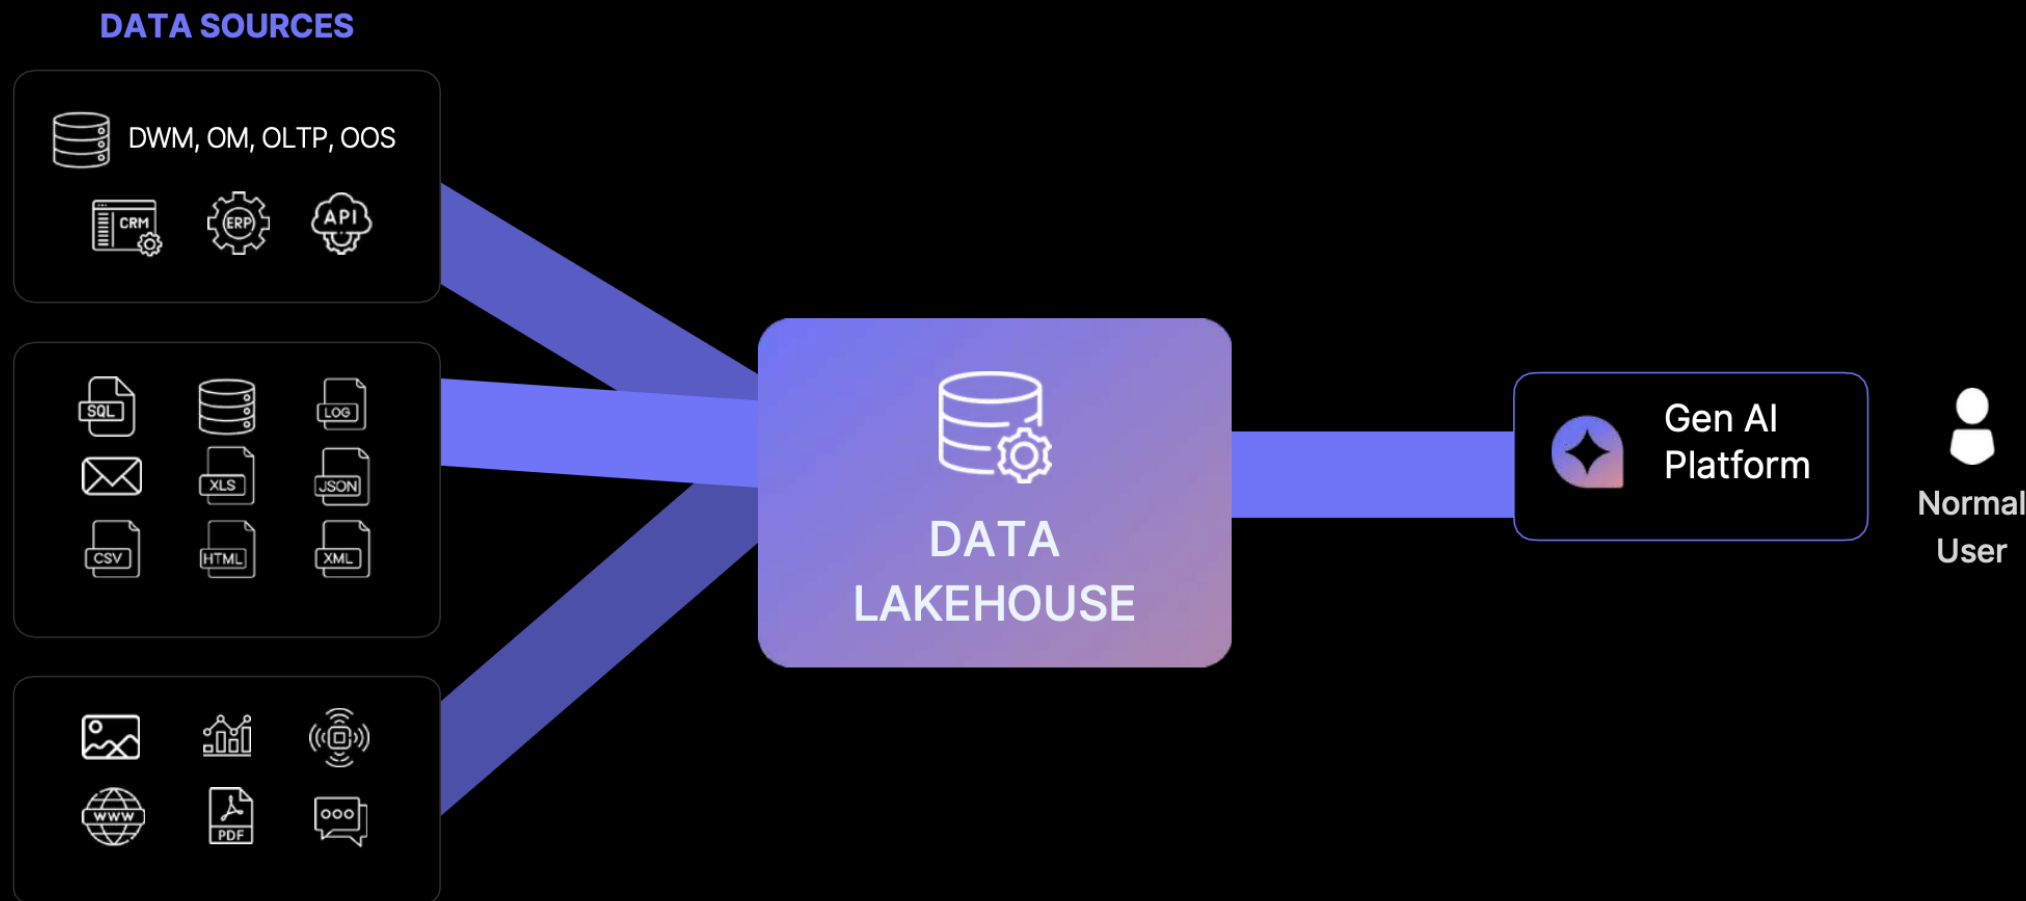

Before Generative AI

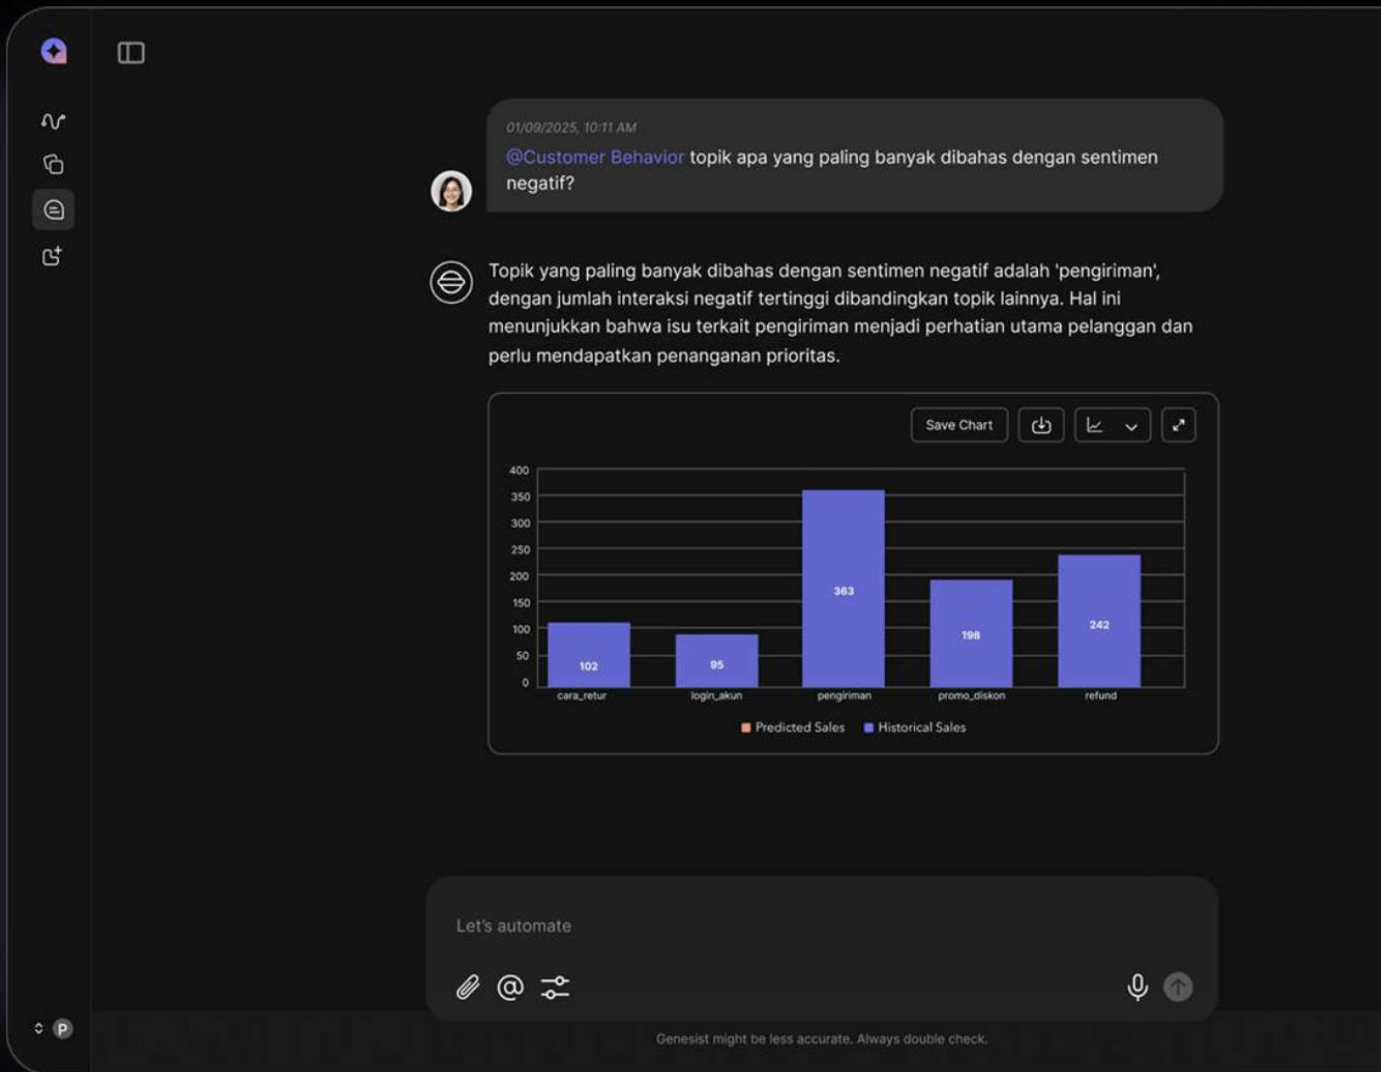

✗ Data from multiple sources is stored in a lakehouse and analyzed by different teams, demanding technical expertise and collaboration.

After Generative AI

✓ Data from any source flows into a single GenAI platform, enabling anyone to analyze, act, and decide — without tech skills required.

INTRODUCING

Genesis

Secure, custom on-prem AI platform

Genesis Studio

No-code platform for no-experience users.

- Workflow for chat or voice AI agent
- Personalize your AI agent
- Add knowledge from various sources
- Add actions and multiple conditions
- Test AI with a simple conversation
- Save and run agent securely

Name Agent

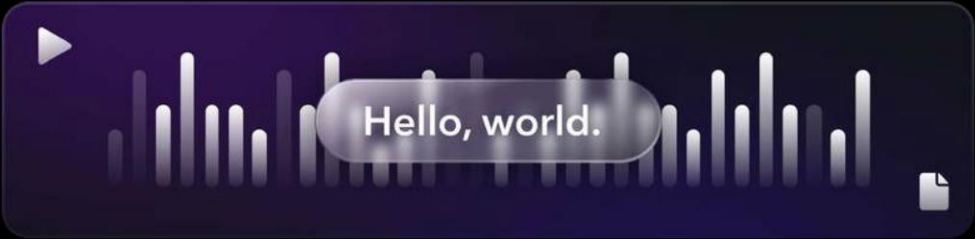

- Shopping Assistant
- About Genesist
- Screening CVs
- Employee Contract
- MConsultant
- Policy Connect and Procedure

Create Agent

Single app to run multiple AI agents.

- Endless data extraction
- Advanced citations
- Insight visualization
- Seamless communication
- Task automation

Audio Intelligence

Accurate and real-time transcripts in global and regional languages

Go Beyond Chat. Enterprise Autonomy.

Soca Speech AI services enable you to transcribe audio, understand conversations, and deploy real-time voice-bots with endless use cases, such as :

Conversational AI

Contact Centers

Speech Analytics

Medical Transcription

Media Transcription

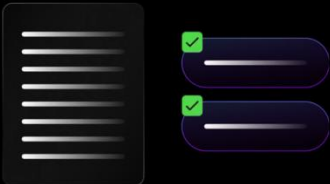

Meeting Note Taker

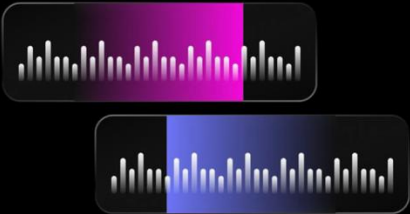

Genova is our advanced speech model that delivers accurate transcription, intelligent speech understanding, and real-time conversational capabilities.

Data Security

Soca prioritizes privacy and data security, using AES-256 encryption and PII masking, along with robust compliance measures, to protect sensitive information.

AI Safety

Soca safeguards AI with **human-guided learning** and **CyberSecEval 2**, preventing toxic outputs and cyber threats.

With **Soca Shield** as its AI guardrails:

- **Input-Level Mitigation:** Filters risky keywords and guides responses with prompt engineering.
- **Output-Level Mitigation:** Blacklists flagged words and uses sentiment analysis to prevent negativity.

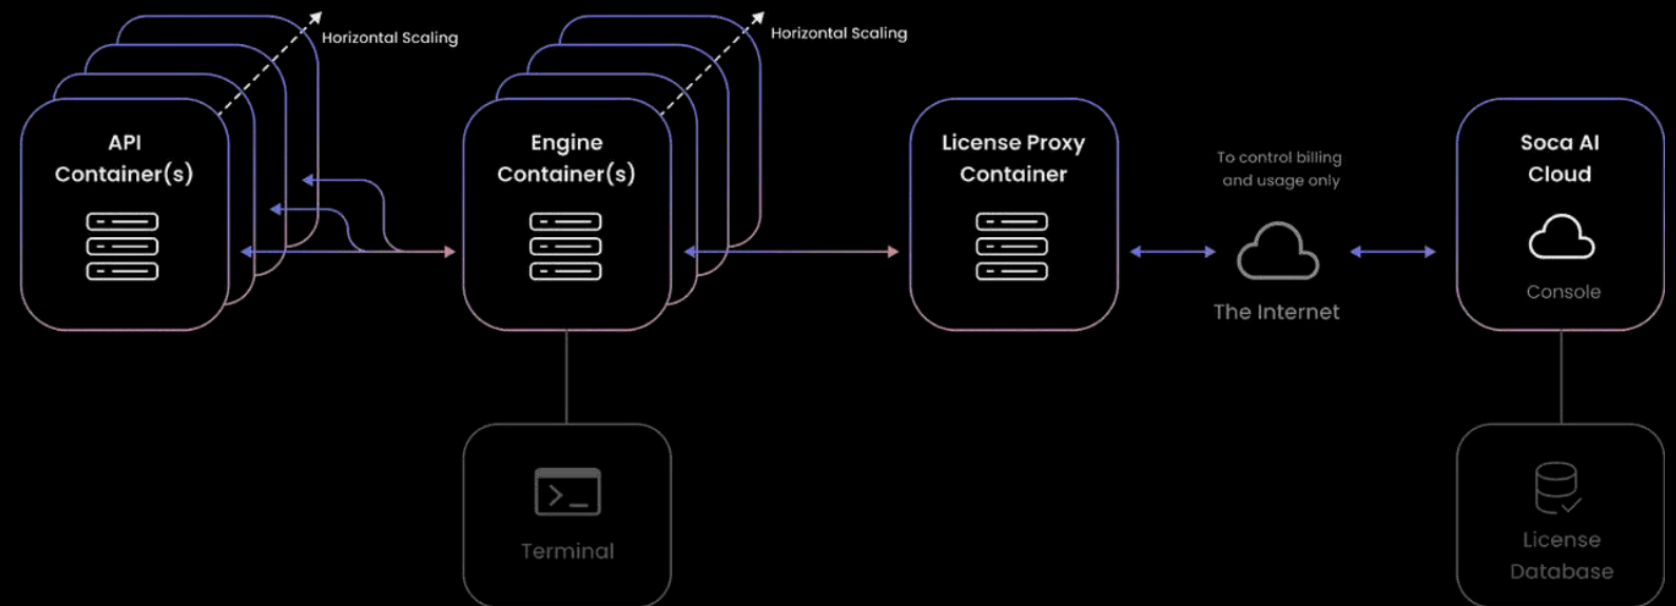

On-Prem Deployment

Soca supports a variety of deployment methods, including an on-premises (on-prem) offering, which is an isolated service deployed to customer-requisitioned cloud instances or customer data centers.

We will outline the installation requirements, guide you through environment configuration and server setup, demonstrate the application installation, identify key files and directories, and assist with server maintenance and security planning.

Why on-prem?

One common use-case for deploying Soca on-prem is to meet security requirements. The reported information for each request includes requested features, and success response codes. No contents, files, or identifiable markers of the request are sent to Soca Cloud.
